

# Page Builder

## Wireframing Templates

# Create Page Layouts & Full Website Prototypes In Minutes

This template includes 3-5 variations for every standard section of a modern website. **Delete the sections you don't want and keep the desired layout.**

This will allow you to communicate the project's layout and collect the content you need visually, giving your client clarity and context to tasks that often delay project completion.

**Paired with this template, Atarim will solve 3 major project delivery challenges to significantly shorten the project completion time:**

- ✓ **Layout Approval:** Agree on the layout before you build and eliminate Scope Creep, providing clarity for you and your client.
- ✓ **Gather Content:** Collect titles, text, links, CTA, images and design requests visually and intuitively with our point and comment tool.
- ✓ **Train Clients:** Add stickers on the page to explain the content you need and to show your client exactly where it will go (no more logos inside Word docs).

## Video training on using the template:

# How to use the templates:

- **Elementor PRO:** Use the native template importing tool by Elementor to import the JSON file.  
More details: <https://elementor.com/help/template-library/>
- **Beaver Builder:** Use the WordPress import tool (Tools >> Import) to import the JSON File.  
More details: <https://docs.wpbeaverbuilder.com/beaver-builder/layouts/templates/export-and-import-saved-templates-rows-columns-modules/#import-custom-layout-templates-and-saved-rows-columns-and-modules>
- **Divi Builder/Theme:** Within the Divi Builder, use the “Portability” tool (Last icon in the middle section) to import the JSON File  
More details: <https://www.elegantthemes.com/documentation/divi/library-import/#:~:text=To%20import%20a%20Divi%20Builder,Divi%20Builder%20Layouts%20button.%E2%80%9D%E2%80%9D>
- **Oxygen:**
  1. Copy the json code in "Oxygen-import.txt" inside Oxygen > Export & Import > Import (don't forget to check the checkbox to import global colors) and submit
  2. Tools > Import > WordPress (Install Now) or Run importer  
Then import the file "Atarim-oxygen-template-all-content.xml" and import.  
Assign posts to your user and check "Download and import file attachments" and submit
  3. Oxygen > Settings > Security > Sign All Shortcodes (page) and start shortcodes signing process
  4. Oxygen > Settings > CSS Cache > Regenerate CSS Cache

Big thanks to Adrien Robert that helped us create this template ( <https://www.facebook.com/adrien.robert/> )

- **Gutenberg** (Native WordPress Builder): Inside the builder, navigate to “Manage All Reusable Blocks” by clicking the 3 dots on the top right of the Gutenberg page editor and import the JSON file.
